Welcome by the Head of School

I am delighted to welcome you as a new student to the School of Computing and Intelligent Systems in the Faculty of Computing and Engineering of the University of Ulster. The Magee campus is situated in a very attractive location on a hillside overlooking the river Foyle in a mainly residential quarter of the city, so you will benefit from the additional facilities offered by a city-centre campus.

The School of Computing and Intelligent Systems offers programmes in Computer Science, Games, ICT, Electronics and joint courses with other Faculties. The School has excellent laboratory facilities and has established a reputation for excellence in teaching and research. Our courses have been designed to meet the needs of industry and commerce, and our students are extremely successful in gaining high quality, well paid employment within a very short period after graduation. On the campus you will have full access to the high-quality computing facilities that are available 24 hours a day, 7 days a week.

You will encounter a number of challenges this year, ranging from a change in the learning environment and the relationship you had with your previous teachers, to the demands of managing your time and finances to cope with your course. To assist in this process you will be allocated to an academic member of staff in a small group with typically 7 other students. This member of staff will provide studies advice support during the first two years of your course. Fortunately, the Magee campus also has a reputation as a friendly student environment, and students are encouraged to ask for assistance from staff.

Finally, although we expect that you will dedicate considerable effort to your studies in the next few years at Magee, please also take advantage of the various activities available on the campus and in the local area. It is very important that you also develop the broader social skills to complement the academic knowledge that will allow you to follow a successful future career. I hope that you will be challenged, that you will enjoy your programme of study and that you will grasp this tremendous opportunity as you begin the first year towards graduation from the Magee Campus of the University of Ulster.

Professor Liam P Maguire
Head of School
School of Computing and Intelligent Systems
Faculty of Computing and Engineering
Magee

Faculty/School Structure

The Faculty consists of four Schools, as well as the Engineering Research Graduate School. The Faculty enjoys a presence on three campuses namely, Coleraine, Jordanstown and Magee. If you are studying a programme at Jordanstown which includes design modules you may also attend classes at the Belfast campus. A range of undergraduate, postgraduate and professional development programmes is offered by the Faculty, planned in collaboration with industry, professional bodies, and where appropriate government bodies. The programmes are designed to meet the needs of industry - offering a good balance of theory and practice - and most include a one year placement.

The Faculty enjoys strong links with industry - working with businesses to assist in the development of programmes, consultancy, research and development, and through Knowledge Transfer Partnerships. These links create excellent opportunities for you in terms of placement opportunities and greatly enhance your employment prospects.

The Faculty of Computing and Engineering is involved in many different aspects of research including Intelligent Systems, Intelligent Multimedia, Smart Home Technologies, Data Mining, Artificial Intelligence, Software Engineering, Information Engineering, Bio-Engineering, Medical Informatics and Statistics, Nanotechnology and Engineering Composites – to name but a few! Once you have finished studying at undergraduate level you may decide that you would like undertake a postgraduate qualification in one of these areas.

The [School of Computing and Intelligent Systems](#) is based at [Magee](#) campus, which is a rapidly expanding city-centre campus close to the River Foyle, city centre shopping and leisure and entertainment facilities. There is always something exciting happening at Magee – it is an excellent place to experience student life to the full.

The School has a strong focus on teaching and research in the areas of computer science, computer games and electronic systems. In particular the School is noted for its strengths in the integration of these areas – a critical aspect for the design of modern computational systems for industry, education, medicine, entertainment and commerce. The School offers programmes in computer science, computer games and electronics which are complemented by a number of modular programmes, each of which combine computing with another discipline, including design and various aspects of business, modern languages and psychology. Students can now study Multimedia Computer Games and Computer Games Development.

The School's research has a particular emphasis on intelligent computational systems and has gained support for the establishment of a £20M Intelligent Systems research Centre which focuses on areas such as computational neuroscience, cognitive robotics, ambient intelligence and the creative industries.

Communication – Key Staff

This student handbook provides information on the course structure and content and a range of related information regarding the management and presentation of the different modules on these programmes of study. There are also a number of web based links to additional information about the School, Faculty and University. In addition the Course Director is available to give advice and guidance throughout your time of study.

School Office (MG048) – Opening Hours

Monday to Friday 10.00am to 4.00pm
(Except Wednesday-closes at 2.00pm/Friday-closes at 3.00pm)

Notice Boards

Communication of teaching/lab timetables, meetings and other events associated with your study is via:

School Notice board – outside School Office
Postgraduate Study Notice board – outside Laboratory MG122

Teaching and Learning Support Charter

Academic Calendar

DATES OF ATTENDANCE/EXAMINATIONS/VACATIONS : 2011/12

Semester 1 (Autumn)	Monday 26 September 2011	Teaching begins
	Friday 16 December 2011	Teaching ends
	Monday 19 December 2011	Christmas Vacation begins
	Monday 26 December 2011 to Monday 3 January 2012	University Closed (Christmas)
	Friday 6 January 2012	Christmas Vacation ends
	Monday 9 January to Saturday 21 January 2012	Examination Period
	Friday 27 January 2012	Autumn Semester ends
	Friday 10 February 2012	Last date for meetings of Course/Subject Committees (Semester One Progress review)
Semester 2 (Spring)	Monday 30 January 2012	Teaching begins
	Monday 19 March 2012	University Closed (St Patrick's Day)
	Monday 2 April 2012	Easter Vacation begins
	Monday 9 April to Friday 13 April 2012	University Closed
	Friday 13 April 2012	Easter Vacation ends
	Monday 7 May 2012	University Closed (May Day)
	Tuesday 8 May to Friday 11 May 2012	Revision week (non-teaching)
	Monday 14 May to Saturday 26 May 2012 (with possible extension to 29 May if required for first sit examinations)	Examination period
	Friday 1 June 2012	Spring semester ends
	Thursday 14 June 2012	Last date for meetings of Boards of Examiners
Monday 2 to Tuesday 10 July 2012	Summer Graduation Ceremonies	
Resit Period	Wednesday 15 August to Thursday 23 August 2012	Supplementary Examinations
	Monday 27 August to Friday 31 August 2012	Meetings of Boards of Examiners
Semester 3 (Summer)	Monday 23 July 2012	Teaching begins
	Monday 3 September to Friday 7 September 2012	Examination Period

Friday 14 September 2012

Summer Semester ends

Monday 17 September to Friday
21 September 2012

Meetings of Boards of
Examiners

B1 PROGRAMME SPECIFICATION

UNIVERSITY OF ULSTER

COURSE TITLE:

Postgraduate Diploma/Master of Science Computing and Intelligent Systems

1 AWARDING INSTITUTION/BODY:

University of Ulster

2 TEACHING INSTITUTION:

University of Ulster

3 LOCATION:

Magee Campus

4 ACCREDITED BY:

University of Ulster

5 FINAL AWARD:

Postgraduate Diploma

Master of Science

6 MODE OF ATTENDANCE:

Full-time

Part-time

7 SPECIALISMS:

Computing

8 COURSE/UCAS CODE:

Computing and Intelligent Systems

Full-time: 2090PM-EN/2088PM-EN; Part-time: 2249PM-EN/2245PM-EN

9 DATE REVISED: 2007/2008

10 EDUCATIONAL AIMS OF THE COURSE:

The course aims to provide postgraduate education and training in the concepts and methods of computing and intelligent systems and their applications to the needs of the commercial, industrial and business communities.

It aims to impart the high-level skills necessary for graduates to pursue a career in computing and intelligent systems or a related area.

It aims to provide a platform for graduates to embark on further research studies, or a leadership role in the specification, design and implementation of large-scale computer systems.

11 MAIN LEARNING OUTCOMES:

The following reference points were used to inform the development of the programme and its learning outcomes:

- The University's Vision and core strategic aims, teaching and learning strategy and policies
- Draft benchmarking standards for taught Masters in Computing (supported by QAA) at <http://www.comp.leeds.ac.uk/roger/cphc/Masters/BM.pdf>
- Current research or other advanced scholarship carried out by academic staff
- Requirements of the British Computer Society
- National and University qualifications and credit frameworks.

The course provides opportunities for students to achieve and demonstrate the following learning.

Successful students will be able to:

11K KNOWLEDGE AND UNDERSTANDING OF SUBJECT

- K1** demonstrate knowledge and sound understanding of the fundamental concepts, principles, theories and practices underlying computing in the domain of knowledge based systems.
- K2** recognise and analyse criteria and specifications appropriate to specific problems and plan strategies for their implementation.
- K3** employ effectively practices and tools for the specification, design, implementation and critical evaluation of intelligent computing applications.
- K4** analyse the extent to which an intelligent system meets the criteria defined for its current deployment and future evolution.
- K5** communicate effectively ideas, proposals and designs to a range of audiences, using rational and reasoned arguments either orally, written or electronically.(Masters project only)
- K6** understand the professional, legal, moral and ethical issues involved in the exploitation of computer technology. (Masters project only)

Teaching and Learning Methods: Lectures, tutorials, seminars and practical sessions.

Assessment Methods: Coursework, written unseen examinations.

11I INTELLECTUAL QUALITIES

- I1** specify, design and construct intelligent systems.
- I2** evaluate such systems with respect to general quality and possible trade-offs within the parameters of the problem.
- I3** assess the implications, risks and safety aspects of applying an intelligent solution to a selected application domain.
- I4** generate and evaluate tests which investigate the functionality of intelligent based systems. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, supervised practical sessions and self-directed learning.

Assessment Methods: Coursework related to case studies and projects, written unseen examinations, workbooks, project reports and dissertation.

11P PROFESSIONAL/PRACTICAL SKILLS

- P1** select and use appropriate hardware and software, recognising its logical and physical properties.
- P2** comprehend the complete engineering process involved in the effective deployment of computers to solve practical problems.
- P3** deploy effectively computer based tools towards the construction and documentation of intelligent systems applications.
- P4** write reports, using complex arguments, for various audiences including research, technical or commercial domains. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, problem based seminars and practical sessions, project preparation and implementation.

Assessment Methods: Problem based coursework, project interim reports and research paper presentation.

11T TRANSFERABLE SKILLS

- T1** learn in both familiar and unfamiliar situations making effective use of information-retrieval skills and of learning resources.
- T2** communicate effectively using various media and with a variety of audiences.
- T3** make effective use of general Information Technology facilities.

- T4** demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks to a professional level.
- T5** appreciate the need for continuing professional development in recognition of the requirement for Life Long Learning. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, seminars and practical sessions, project preparation and implementation.

Assessment Methods: Assessments, project presentations, interim reports and research paper presentation.

PgDip - Computing and Intelligent Systems

12 STRUCTURE AND REQUIREMENTS FOR THE AWARD

The Postgraduate Diploma programme consists of eight taught modules. The Masters degree consists of the eight modules of the Postgraduate Diploma in addition to a substantial piece of independent research. The modular organisation of the PgDip/MSc course means that it can be taken in either full or part-time mode of study. In full-time mode, study for the Masters is completed in one academic year. In part-time mode the study for the Masters takes at least two academic years. Fulltime students will normally take 4 of the taught modules in each of the first two semesters, and seek to complete the Master's Project during the following summer. The internal coherence of the programme implies that the first block of four taught modules taken should be successfully completed before embarking on the second block of four taught modules. Students progression to the Masters project is subject to having successfully passed all eight modules with the pass mark being 50% for each module. Each of the taught modules attracts 15 credit points, with the Masters Project attracting 60 credit points. Candidates for the Master's are required to obtain 180 credit points at level 7 for the award of MSc Computing and Intelligent Systems. Candidates who do not wish to or are unable, for any reason, to complete the Masters Project can exit from the Program with a Postgraduate Diploma, having successfully completed all 8 taught modules to gain 120 credit points at Level 7.

Module Title	Credit Level	Credit Points	Module Status	Awards
Database Technologies	7	15	Compulsory	
Computational Intelligence	7	15	Compulsory	
Research Methods	7	15	Compulsory	
Artificial Intelligence/Knowledge Based Systems	7	15	Compulsory	
Network Management	7	15	Compulsory	
Mobile and Pervasive Computing	7	15	Compulsory	
Cognitive Systems	7	15	Compulsory	
Intelligent Embedded Systems	7	15	Compulsory	
Masters Project (Research)	7	60	Compulsory	MSc (180 points)

13 SUPPORT FOR STUDENTS AND THEIR LEARNING

Students and their learning are supported in a number of ways:

- Induction, introducing curriculum, course structure, organisation and study and interpersonal skills
- Student Handbook and Module Guide
- Computer Laboratories with a comprehensive range of software

- Extensive Library and other Learning Resources
- Student e-mail accounts and full access to the Internet
- University and School Intranet with a wide range of learning support material including WebCT and PDS
- Course Specific texts, learning packs and resource tools
- Personal contact with Course Director
- Learning materials provided by Module Co-ordinators
- Each student is allocated an Advisor of Studies
- School Administrative Staff
- Group study rooms available
- Full spectrum of support and guidance services offered by Student Support, Sport and Recreation, Students' Union and Careers Service

14 CRITERIA FOR ADMISSION

Applicants must hold a degree or equivalent in Computing/Engineering or a related discipline or demonstrate their ability to undertake the course through the accreditation of prior experiential learning. An interview may form part of the admissions process.

15 EVALUATING AND IMPROVING THE QUALITY AND STANDARD OF TEACHING AND LEARNING

Mechanisms for review and evaluation of teaching, learning, assessment, the curriculum and outcome standards:

- External benchmark standards from the UK Quality Assurance Agency (QAA) and the British Computer Society Guidelines on Course Accreditation
- Views of students as expressed through staff/student consultation
- Views of graduates in the National Student Survey
- Views of employers
- Views of external examiners
- Student performance data and career progression
- University processes for initial approval, periodic re-approval and annual monitoring.

In addition, there are University/Faculty/School strategies for teaching and learning.

16 REGULATION OF STANDARDS

Assessment Rules

Classification of Final Result for Masters Degrees

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction 70%

Pass 50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall average of 70% or more, with a mark of at least 70% being achieved in the Masters Project module.

Classification of Final Result for Postgraduate Diploma

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction 70%

Pass 50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall mark of at least 70%.

Candidates registered on linked postgraduate courses shall receive only one award at the highest level during a period of continuous registration.

Candidates admitted with advanced standing shall be assessed in accordance with the course regulations using the evidence from the accredited prior learning.

External Examiners

External examiners are academic subject or professional experts appointed from outside the University. Their key functions are to contribute to the assurance of the standards of the award and the fair treatment of students. They are involved in the moderation and approval of assessments and the moderation of the marking undertaken by internal examiners. The full role and responsibilities are set out in the University's Handbook for External Examiners. External Examiners are given training on appointment.

17 INDICATORS OF QUALITY RELATING TO TEACHING AND LEARNING

Selected indicators of quality relating to Teaching and Learning include:

- Research Assessment Exercise HEFCE rating of 4.(2001)

- Faculty of Computing and Engineering hosts the LTSN Centre for Computing and has been proactive in the development of new teaching and learning environments and techniques.
- The Faculty also hosts the Centre for Software Process Technologies with a brief to vitalise the software industry in Northern Ireland by engaging in '...applied research with commercial software development organisations to improve the efficiency, effectiveness and quality of their processes and products.'
- Several members of the course team belong to the Research Institute in Computing Science
- A Discipline Audit Trail for Computing was examined as part of the 2005 QAA Institutional Audit with a number of positive comments. The following summary extract is appropriate:
“Computing programmes in the three Schools are defined appropriately and satisfy the requirements of professional accreditation where relevant. A review of assessed work confirmed that the standards achieved by students are appropriate to the titles of the awards and their location in FHEQ. The quality and extent of the DSED impressed the audit team, as did the articulation by staff of their commitment to the continual development and refinement of their courses and their attendance to issues such as student retention in very positive and supportive ways. Students felt that staff were very approachable and helpful, and this contributed significantly to a positive student learning experience. The quality of learning opportunities is suitable for the programmes of study leading to the named awards.”
Report at: <http://www.qaa.ac.uk/reviews/reports/instReports.asp?instID=H-0185>

10 EDUCATIONAL AIMS OF THE COURSE:

The course aims to provide postgraduate education and training in the concepts and methods of computing and design and their applications to the needs of the commercial, industrial and business communities.

It aims to impart the high-level skills necessary for graduates to pursue a career in multimedia design or a related area.

It aims to provide a platform for graduates to embark on further research studies, or a leadership role in the specification, design and implementation of large-scale multimedia applications.

11 MAIN LEARNING OUTCOMES:

The following reference points were used to inform the development of the programme and its learning outcomes:

- The University's Vision and core strategic aims, teaching and learning strategy and policies
- Draft benchmarking standards for taught Masters in Computing (supported by QAA) at <http://www.comp.leeds.ac.uk/roger/cphc/Masters/BM.pdf>
- Current research or other advanced scholarship carried out by academic staff
- Requirements of the British Computer Society
- National and University qualifications and credit frameworks.

The course provides opportunities for students to achieve and demonstrate the following learning.

Successful students will be able to:

11K KNOWLEDGE AND UNDERSTANDING OF SUBJECT

- K1** demonstrate knowledge and sound understanding of the fundamental concepts, principles, theories and practices underlying computing in the domain of multimedia design
- K2** recognise and analyse criteria and specifications appropriate to specific problems and plan strategies for their implementation.
- K3** employ effectively practices and tools for the specification, design, implementation and critical evaluation of multimedia applications.
- K4** analyse the extent to which a multimedia -based system meets the criteria defined for its current deployment and future evolution.
- K5** communicate effectively ideas, proposals and designs to a range of audiences, using rational and reasoned arguments either orally, written or electronically. (Masters project only)
- K6** understand the professional, legal, moral and ethical issues involved in the exploitation of computer technology. (Masters project only)

Teaching and Learning Methods: Lectures, tutorials, seminars and practical sessions.

Assessment Methods: Coursework, written unseen examinations.

11I INTELLECTUAL QUALITIES

- I1** specify, design and construct multi-media type systems.

- I2** evaluate such systems with respect to general quality and possible trade-offs within the parameters of the problem.
- I3** assess the implications, risks and safety aspects of applying a multimedia based solution to a selected application domain.
- I4** reason critically in the area of multimedia based systems. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, supervised practical sessions and self-directed learning.

Assessment Methods: Coursework related to case studies and projects, written unseen examinations, workbooks, project reports and dissertation.

11P PROFESSIONAL/PRACTICAL SKILLS

- P1** select and use appropriate hardware and software, recognising its logical and physical properties.
- P2** comprehend the complete engineering process involved in the effective deployment of computers to solve practical problems.
- P3** deploy effectively computer based tools towards the construction and documentation of multimedia applications.
- P4** write reports, using complex arguments, for various audiences. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, problem based seminars and practical sessions, project preparation and implementation.

Assessment Methods: Problem based coursework, project interim reports and research paper presentation.

11T TRANSFERABLE SKILLS

- T1** learn in both familiar and unfamiliar situations making effective use of information-retrieval skills and of learning resources.
- T2** communicate effectively using various media and with a variety of audiences.
- T3** make effective use of general Information Technology facilities.
- T4** demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks to a professional level.

T5 demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks to a professional level.(Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, seminars and practical sessions, project preparation and implementation.

Assessment Methods: Assessments, project presentations, interim reports and research paper presentation.

Masters Project (Professional)	7	60	Compulsory	MSc (180 points)

13 SUPPORT FOR STUDENTS AND THEIR LEARNING

Students and their learning are supported in a number of ways:

- Induction, introducing curriculum, course structure, organisation and study and interpersonal skills
- Student Handbook and Module Guide
- Computer Laboratories with a comprehensive range of software

- Extensive Library and other Learning Resources
- Student e-mail accounts and full access to the Internet
- University and School Intranet with a wide range of learning support material including WebCT and PDS
- Course Specific texts, learning packs and resource tools
- Personal contact with Course Director
- Learning materials provided by Module Co-ordinators
- Each student is allocated an Advisor of Studies
- School Administrative Staff
- Group study rooms available
- Full spectrum of support and guidance services offered by Student Support, Sport and Recreation, Students' Union and Careers Service

14 CRITERIA FOR ADMISSION

Applicants must hold a degree or equivalent in Computing/Design or a related discipline or demonstrate their ability to undertake the course through the accreditation of prior experiential learning. An interview may form part of the admissions process.

Specific requirements for admission are:

- have gained a degree that includes a significant component of computing and design

15 EVALUATING AND IMPROVING THE QUALITY AND STANDARD OF TEACHING AND LEARNING

Mechanisms for review and evaluation of teaching, learning, assessment, the curriculum and outcome standards:

- External benchmark standards from the UK Quality Assurance Agency (QAA) and the British Computer Society Guidelines on Course Accreditation
- Views of students as expressed through staff/student consultation
- Views of graduates in the National Student Survey
- Views of employers
- Views of external examiners
- Student performance data and career progression
- University processes for initial approval, periodic re-approval and annual monitoring.

In addition, there are University/Faculty/School strategies for teaching and learning.

16 REGULATION OF STANDARDS

Assessment Rules

Classification of Final Result for Masters Degrees

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction 70%

Pass 50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall average of 70% or more, with a mark of at least 70% being achieved in the Masters Project module.

Classification of Final Result for Postgraduate Diploma

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction 70%

Pass 50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall mark of at least 70%.

Candidates registered on linked postgraduate courses shall receive only one award at the highest level during a period of continuous registration.

Candidates admitted with advanced standing shall be assessed in accordance with the course regulations using the evidence from the accredited prior learning.

External Examiners

External examiners are academic subject or professional experts appointed from outside the University. Their key functions are to contribute to the assurance of the standards of the award and the fair treatment of students. They are involved in the moderation and approval of assessments and the moderation of the marking undertaken by internal examiners. The full role and responsibilities are set out in the University's Handbook for External Examiners. External Examiners are given training on appointment.

17 INDICATORS OF QUALITY RELATING TO TEACHING AND LEARNING

Selected indicators of quality relating to Teaching and Learning include:

- Research Assessment Exercise HEFCE rating of 4 (2001)

- Faculty of Computing and Engineering hosts the LTSN Centre for Computing and has been proactive in the development of new teaching and learning environments and techniques.
- The Faculty also hosts the Centre for Software Process Technologies with a brief to vitalise the software industry in Northern Ireland by engaging in '...applied research with commercial software development organisations to improve the efficiency, effectiveness and quality of their processes and products.'
- Several members of the course team belong to the Research Institute in Computing Science
- A Discipline Audit Trail for Computing was examined as part of the 2005 QAA Institutional Audit with a number of positive comments. The following summary extract is appropriate:
 "Computing programmes in the three Schools are defined appropriately and satisfy the requirements of professional accreditation where relevant. A review of assessed work confirmed that the standards achieved by students are appropriate to the titles of the awards and their location in FHEQ. The quality and extent of the DSED impressed the audit team, as did the articulation by staff of their commitment to the continual development and refinement of their courses and their attendance to issues such as student retention in very positive and supportive ways. Students felt that staff were very approachable and helpful, and this contributed significantly to a positive student learning experience. The quality of learning opportunities is suitable for the programmes of study leading to the named awards."
 Report at: <http://www.qaa.ac.uk/reviews/reports/instReports.asp?instID=H-0185>

B1 PROGRAMME SPECIFICATION

UNIVERSITY OF ULSTER

COURSE TITLE:

Postgraduate Diploma/Master of Science Computing for Financial Services

1 AWARDING INSTITUTION/BODY:

University of Ulster

2 TEACHING INSTITUTION:

University of Ulster

3 LOCATION:

Magee Campus

4 ACCREDITED BY:

University of Ulster

5 FINAL AWARD:

Postgraduate Diploma

Master of Science

6 MODE OF ATTENDANCE:

Full-time

Part-time

7 SPECIALISMS:

Computing

8 COURSE/UCAS CODE:

Full-time:5761PM-EN/5762PM-EN; Part-time:5764PM-EN/5765PM-EN

9 DATE REVISED: 2007/2008

10 EDUCATIONAL AIMS OF THE COURSE:

The course aims to provide postgraduate education and training in the concepts and methods of computing and information systems and their application to the needs of the commercial, business, and particularly the Financial Services sector.

It aims to impart the high-level skills necessary for graduates to pursue a career in software engineering, specifically for financial and business systems.

It aims to provide a platform and a vehicle to prepare graduates for a leadership role in the specification, design, and implementation of large-scale computer applications within Financial Services sector industries.

11 MAIN LEARNING OUTCOMES:

The following reference points were used to inform the development of the programme and its learning outcomes:

- The University's Vision and core strategic aims, teaching and learning strategy and policies
- Draft benchmarking standards for taught Masters in Computing (supported by QAA) at <http://www.comp.leeds.ac.uk/roger/cphc/Masters/BM.pdf>
- Current research or other advanced scholarship carried out by academic staff
- Requirements of the British Computer Society
- National and University qualifications and credit frameworks.

The course provides opportunities for students to achieve and demonstrate the following learning.

Successful students will be able to:

11K KNOWLEDGE AND UNDERSTANDING OF SUBJECT

- K1** demonstrate knowledge and sound understanding of the fundamental concepts, principles, theories and practices underlying computing as it is used within IT applications supporting the Financial Services.
- K2** recognise and analyse criteria and specifications appropriate to specific problems and plan strategies for their implementation.
- K3** employ effectively practices and tools for the specification, design, implementation and critical evaluation of computer applications.
- K4** analyse the extent to which a computer-based system meets the criteria defined for its current deployment and future evolution.
- K5** communicate effectively ideas, proposals and designs to a range of audiences, using rational and reasoned arguments either orally, written or electronically. (Masters Project only)
- K6** understand the professional, legal, moral and ethical issues involved in the exploitation of computer technology. (Masters project only)

Teaching and Learning Methods: Lectures, tutorials, seminars and practical sessions.

Assessment Methods: Coursework, written unseen examinations.

11I INTELLECTUAL QUALITIES

- I1** specify, design and construct computer-based systems.

- I2** evaluate such systems with respect to general quality and possible trade-offs within the parameters of the problem.
- I3** assess the implications, risks and safety aspects of applying a computing based solution to a selected application domain.
- I4** reason critically in the area of financial services systems. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, supervised practical sessions and self-directed learning employing study packs and research based materials.

Assessment Methods: Coursework related to case studies and projects, written unseen examinations, workbooks, project reports and dissertation.

11P PROFESSIONAL/PRACTICAL SKILLS

- P1** select and use appropriate hardware and software, recognising its logical and physical properties.
- P2** comprehend the complete engineering process involved in the effective deployment of computers to solve practical problems.
- P3** deploy effectively computer based tools towards the construction and documentation of computer applications.
- P4** write reports, using complex arguments, for various audiences including management, technical or users. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, problem based seminars and practical sessions, project preparation and implementation.

Assessment Methods: Problem based coursework, project reports and Professional Masters Project Report.

11T TRANSFERABLE SKILLS

- T1** learn in both familiar and unfamiliar situations making effective use of information-retrieval skills and of learning resources.
- T2** communicate effectively using various media and with a variety of audiences.
- T3** make effective use of general Information Technology facilities.
- T4** act ethically as a researcher and IT professional.

T5 demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks to a professional level. (Masters project only)

Teaching and Learning Methods: Lectures, tutor directed tutorials, seminars and practical sessions, project preparation and implementation.

Assessment Methods: Assessments, project presentations, reports and Professional Master's Project Report.

.

12 STRUCTURE AND REQUIREMENTS FOR THE AWARD

The Postgraduate Diploma programme consists of eight taught modules. The Masters degree consists of the eight modules of the Postgraduate Diploma in addition to a substantial piece of independent research. The modular organisation of the PgDip/MSc course means that it can be taken in either full or part-time mode of study. In full-time mode, study for the Masters is completed in one academic year. In part-time mode the study for the Masters takes at least two academic years. Fulltime students will normally take 4 of the taught modules in each of the first two semesters, and seek to complete the Master's Project during the following summer. The internal coherence of the programme implies that the first block of four taught modules taken should be successfully completed before embarking on the second block of four taught modules. Students progression to the Masters project is subject to having successfully passed all eight modules with the pass mark being 50% for each module. Each of the taught modules attracts 15 credit points, with the Master's Project attracting 60 credit points. Candidates for the Master's are required to obtain 180 credit points at level 7 for the award of MSc Computing for Financial Services. Candidates who do not wish to or are unable, for any reason, to complete the Master's Project can exit from the Program with a Postgraduate Diploma, having successfully completed all 8 taught modules to gain 120 credit points at Level 7.

Module Title	Credit Level	Credit Points	Module Status	Awards
Financial Services Information Systems	7	15	Compulsory	
Database Technologies	7	15	Compulsory	
Advanced Human Computer Interaction	7	15	Compulsory	
Artificial Intelligence / Knowledge Based Systems	7	15	Compulsory	
Mobile and Pervasive Computing	7	15	Compulsory	
Network Management	7	15	Compulsory	
Object-Oriented Information Systems	7	15	Compulsory	
Interoperability and Legacy Systems	7	15	Compulsory	
Masters Project (Professional)	7	60	Compulsory	MSc (180 points)

13 SUPPORT FOR STUDENTS AND THEIR LEARNING

Students and their learning are supported in a number of ways:

- Induction, introducing curriculum, course structure, organisation and study and interpersonal skills
- Student Handbook and Module Guide
- Computer Laboratories with a comprehensive range of software

- Extensive Library and other Learning Resources
- Student e-mail accounts and full access to the Internet
- University and School Intranet with a wide range of learning support material including WebCT and PDS
- Course Specific texts, learning packs and resource tools
- Personal contact with Course Director
- Learning materials provided by Module Co-ordinators
- Each student is allocated an Advisor of Studies
- School Administrative Staff
- Group study rooms available
- Full spectrum of support and guidance services offered by Student Support, Sport and Recreation, Students' Union and Careers Service

14 CRITERIA FOR ADMISSION

Applicants must hold a degree or equivalent in Computing/Business or a related discipline or demonstrate their ability to undertake the course through the accreditation of prior experiential learning. An interview may form part of the admissions process.

Specific requirements for admission are:

have gained a degree that includes a significant component of computing.

15 EVALUATING AND IMPROVING THE QUALITY AND STANDARD OF TEACHING AND LEARNING

Mechanisms for review and evaluation of teaching, learning, assessment, the curriculum and outcome standards:

- External benchmark standards from the UK Quality Assurance Agency (QAA) and the British Computer Society Guidelines on Course Accreditation
- Views of students as expressed through staff/student consultation
- Views of graduates in the National Student Survey
- Views of employers
- Views of external examiners
- Student performance data and career progression
- University processes for initial approval, periodic re-approval and annual monitoring.

In addition, there are University/Faculty/School strategies for teaching and learning.

16 REGULATION OF STANDARDS

Assessment Rules

Classification of Final Result for Master's Degrees

The following shall be the minimum percentages acceptable in determining the overall gradings of candidates.

Pass with Distinction	70%
Pass	50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall average of 70% or more, with a mark of at least 70% being achieved in the Master's Project module.

Classification of Final Result for Postgraduate Diploma

The following shall be the minimum percentages normally acceptable in determining the overall grading of candidates.

Pass with Commendation	70%
Pass	50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall mark of at least 70%.

Candidates registered on linked postgraduate courses shall receive only one award at the highest level during a period of continuous registration.

Candidates admitted with advanced standing shall be assessed in accordance with the course regulations using the evidence from the accredited prior learning.

External Examiners

External examiners are academic subject or professional experts appointed from outside the University. Their key functions are to contribute to the assurance of the standards of the award and the fair treatment of students. They are involved in the moderation and approval of assessments and the moderation of the marking undertaken by internal examiners. The full role and responsibilities are set out in the University's Handbook for External Examiners. External Examiners are given training on appointment.

17 INDICATORS OF QUALITY RELATING TO TEACHING AND LEARNING

Selected indicators of quality relating to Teaching and Learning include:
- Research Assessment Exercise HEFCE rating of 4.(2001)

- Faculty of Computing and Engineering hosts the LTSN Centre for Computing and has been proactive in the development of new teaching and learning environments and techniques.
- The Faculty also hosts the Centre for Software Process Technologies with a brief to vitalise the software industry in Northern Ireland by engaging in '...applied research with commercial software development organisations to improve the efficiency, effectiveness and quality of their processes and products.'
- Several members of the course team belong to the Research Institute in Computing Science
- A Discipline Audit Trail for Computing was examined as part of the 2005 QAA Institutional Audit with a number of positive comments. The following summary extract is appropriate:
 "Computing programmes in the three Schools are defined appropriately and satisfy the requirements of professional accreditation where relevant. A review of assessed work confirmed that the standards achieved by students are appropriate to the titles of the awards and their location in FHEQ. The quality and extent of the DSED impressed the audit team, as did the articulation by staff of their commitment to the continual development and refinement of their courses and their attendance to issues such as student retention in very positive and supportive ways. Students felt that staff were very approachable and helpful, and this contributed significantly to a positive student learning experience. The quality of learning opportunities is suitable for the programmes of study leading to the named awards."

B.3 COURSE REGULATIONS

UNIVERSITY OF ULSTER

1 TITLE	CODE
Postgraduate Diploma/Master of Science in: Computing and Intelligent Systems [FT:2090PM-EN; PT:2249PM-EN / FT:2088PM-EN; PT: 2245PM-EN]	
Computing and Creative Technologies [FT: 6212PM-EN; PT: 6213PM-EN / FT: 6216PM-EN; PT: E6217PM-EN]	
Computing for Financial Services [FT:5761PM-EN; PT:5764PM-EN / FT:5762PM-EN; PT:5765PM-EN]	

2 MODE OF ATTENDANCE

Full-time and Part-time (Evening)

3 DURATION

FULL-TIME: Normally 2/3 semesters of study

PART-TIME: Normally 4/6 semesters of study

4 LOCATION

Magee

5 FACULTY

Faculty of Computing and Engineering.

6 ADMISSION REQUIREMENTS

Applicants must:

- (a) have gained
 - (i) an Honours or non-Honours degree from a University of the United Kingdom or the Republic of Ireland, from the Council for National Academic Awards, the National Council for Educational Awards, the Higher Education and Training Awards Council, or from an institution of another country which is recognised as being of an equivalent standard; or

- (ii) an equivalent standard in a Postgraduate Certificate, Graduate Diploma, Graduate Certificate or an approved alternative qualification; and

for Computing and Intelligent Systems, the degree qualifications must be in Computing, Engineering or a related discipline;

for Computing and Creative Technologies, the degree qualifications must be in Computing, Design or a related discipline with a significant computing/design content;

for Computing for Financial Services, the degree qualifications must be in a Business, Scientific or related discipline, with a significant computing content.

For each programme an interview may form part of the selection process.

and

- (b) provide evidence of competence in written and spoken English (GCSE grade C or equivalent); IELTS grade 6.0 for non-native English speakers.

or as an alternative to (a) (i) or (a) (ii) and/or (b):

- (c) In exceptional circumstances, where an individual has substantial and significant experiential learning, a portfolio of written evidence demonstrating the meeting of graduate qualities (including subject-specific outcomes, as determined by the Course Committee) may be considered as an alternative entrance route. Evidence used to demonstrate graduate qualities may not be used for exemption against modules within the programme.

7 EXEMPTIONS

7.1 Studies pursued and examinations passed in respect of other qualifications awarded by the University or by another university or other educational institution, or evidence from the accreditation of prior experiential learning, may be accepted as exempting candidates from part of the programme provided that

- (a) they shall register as students of the University for modules amounting to at least the final third of the credit value of the award at the highest level in respect of a Master's award and at least 50% of the credit value of the award in respect of a Postgraduate Diploma award
- (b) no exemption shall be permitted from the Research Project

8 ATTENDANCE REQUIREMENTS

- 8.1 Students are expected to attend all classes associated with the programme and be punctual and regular in attendance.
- 8.2 A student who has not been in attendance for more than three days through illness or other cause must notify immediately the Course Director. The student shall state the reasons for the absence and whether it is likely to be prolonged. Where the absence is for a period of more than five working days, and is caused by illness which may affect their studies, the student shall provide appropriate medical certification in accordance with the General Regulations for Students.
- 8.3 Students who are absent without good cause for a substantial proportion of classes may be required to discontinue studies, in accordance with the General Regulations for Students.

9 RULES GOVERNING STUDENT CHOICE

- 9.1 Modules are offered as indicated in the table at section 18. Revisions may be made in accordance with the University's quality assurance procedures. Module availability may vary.

10 EXAMINATION AND ASSESSMENT

- 10.1 The performance of candidates shall be assessed by the Board of Examiners in accordance with the Regulations Governing Examinations in Programmes of Study.
- 10.2 Candidates shall be assessed in the modules for which they have enrolled in each year of study. At the discretion of the Board of Examiners candidates may be required to attend a viva voce examination.
- 10.3 Within each module candidates shall be assessed by coursework; examination; a combination of coursework and examination in accordance with the attached table.
- 10.4 Candidates must achieve an overall module mark of 50% with a minimum mark of 45% in each element of the module.

11 SUBMISSION OF COURSEWORK

- 11.1 Coursework must be submitted by the dates specified by the Course Committee.
- 11.2 Students may seek prior consent from the Course Committee to submit coursework after the official deadline; such requests must be accompanied by a satisfactory explanation, accompanied in the case of

illness by a medical certificate. This application shall be made to the Course Director.

- 11.3 Coursework submitted without consent after the deadline shall not normally be accepted.
- 11.4 Candidates completing a dissertation must submit an unbound version of their dissertation by specified submission deadline for assessment and two final bound copies to the course director by specified date. The dissertation shall be presented in accordance with the Guidelines for the Presentation of Dissertations for Master's Degree programmes. The bound copies shall become the property of the University.
- 11.5 Access to dissertations shall not normally be restricted. Access may be restricted, in exceptional circumstances, for a period of up to two years in the first instance, and for a total period of not more than five years. Such restriction shall be approved in accordance with the procedures described in the Guidelines for the Preparation of Dissertations for Master's Degree programmes. Access to the abstract of the work shall not be restricted.

12 PROGRESS

- 12.1 Progress from semester 1 to semester 2 is automatic.
- 12.2 For part-time programmes: Subject to 13 and 14 hereof, candidates are required to pass all modules in each year of study in order to proceed to the next.

13 PASS

13.1 Minimum Mark

The minimum percentage which must be obtained by a candidate in each assessment element (coursework or examination) in order to be considered for passing the module is 45%.

14 CONSEQUENCES OF FAILURE

- 14.1 Candidates who fail to satisfy the Board of Examiners in assessment may be permitted at the discretion of the Board to re-present themselves as specified in 14.2 for one or more supplementary examination and repeat such coursework or other assessment requirements as shall be prescribed by the Board. Such candidates may be exempted at the discretion of the Board from the normal attendance requirements. Where candidates are required to repeat coursework or to take a supplementary examination the original mark in the failed coursework component or examination shall be

replaced by a mark of 50% or the repeat mark, whichever is the lower for the purpose of calculating the module result.

14.2 In each year, the consequences of failure shall normally be as follows:

Failure in module(s) with an overall value up to and including 60 credit points	Repeat <i>once only</i> of specified examination(s) and/or coursework in the failed module(s) (examinations August).
Failure in module(s) with an overall value of more than 60 credit points and less than 90 credit points	Repeat <i>once only</i> of specified examination(s) and/or coursework in the failed module(s) in the next academic year (examinations January/May) with or without attendance.
Failure in module(s) with an overall value of 90 credit points or more	Repeat <i>once only</i> of specified examination(s) and/or coursework in the failed module(s) in the next academic year with or without attendance, OR withdraw from the programme.

14.3 Candidates who fail the dissertation may be permitted to resubmit the dissertation on one occasion only by a specified date in the following year (within a period not exceeding eight months from the date of the examination board's decision).

15 CLASSIFICATION OF FINAL RESULT

15.1 All modules contribute to the final award. The table at section 18 indicates the contribution of each module to the final award. The weighting of each module's contribution to the overall mark shall be determined by its credit value.

15.2 Classification of Final Result for Master's Degrees

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction 70%

Pass 50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall average of 70% or more, with a mark of at least 70% being achieved in the dissertation. *NOTE THAT: A DISTINCTION MARK MUST BE ACHIEVED IN THE DISSERTATION;*

Provided that they have not been exempted for modules amounting to more than 60 credit points, candidates who fail the dissertation and have passed the taught modules may be assessed for the award of a Postgraduate Diploma in accordance with 15.3.

15.3 Classification of Final Result for Postgraduate Diploma

The following shall be the minimum percentages acceptable in determining the overall grading of candidates.

Pass with Distinction	70%
Pass	50%

The Board of Examiners shall recommend the award of a Pass with Distinction to a candidate who achieves an overall mark of at least 70%.

15.4 Candidates registered on linked postgraduate programmes shall receive only one award at the highest level during a period of continuous registration.

15.5 Candidates admitted with advanced standing shall be assessed in accordance with the programme regulations using the evidence from the accredited prior learning.

16 ILLNESS AND OTHER EXTENUATING CIRCUMSTANCES

16.1 The Board of Examiners may in the case of candidates who are prevented by illness or other sufficient cause from taking or completing the whole or part of the assessment or whose results are substantially affected by illness or other sufficient cause:

- (a) permit the candidate to complete, take, or repeat the examination or coursework or both at an approved subsequent date **or**
- (b) deem the candidate to have passed and recommend an Aegrotat Master's Degree OR Aegrotat Postgraduate Diploma.

16.2 Before an Aegrotat award is recommended a candidate must have indicated that he or she is willing to accept the award.

17 REVISIONS TO REGULATIONS

These regulations may be revised during the student's period of registration in accordance with the procedures approved by Senate.

Design Entrepreneurship Applied

Mobile and Pervasive Computing

The emergence of small and inexpensive processors coupled with the development of wireless networks, and the development of the Mobile Web provides new opportunities for the deployment of information via mobile devices such as smart-phones, PDAs and embedded microprocessors. The convergence of technologies and devices whose primary characteristics are that they are mobile, wireless, small and powerful, promises to enable new systems to provide information 'anywhere-anytime'. In these next-generation systems, the users' information essentially follows them around (i.e. is pervasive).

This fundamental shift in the delivery and management of information generates significant potential for the creation and commercial exploitation of new applications, which could realise enormous benefits in industry and commerce, and arguably impact beneficially on all spheres of human activity. However, the reliable provision of information 'on-demand' anytime, anywhere also generates a whole new generation of problems. These challenges, developments, problems and the emerging solutions are the core subject of this module. The aim of this module is to expose postgraduate students to current developments in converging computing technologies which create both the opportunity and the desire for pervasiveness.

Having completed this module the student will have a strong understanding of the opportunities and challenges afforded by the emerging discipline of Pervasive computing. Practical experience will have been gained in applications development in this genre and the student will also have gained a solid theoretical underpinning in the relevant technologies. The student will also be very aware of the key role played by the application in the survival of any technology, along with a good appreciation of the difficulty of predicting which systems and technologies will prosper and evolve, and which will disappear.

Cognitive Systems

Cognitive Systems is designed to develop the students' appreciation of how theories, principles, mechanisms and models from Cognitive Science, Neuroscience and natural autonomous systems can apply to Computer Science. This module gives a modern and innovative approach to the fundamental concepts and basic design principles of Cognitive Systems. There is also a focus on how Cognitive Systems can be used for numerous real world applications.

The aims of the module are to:

- i) investigate the basic concepts within cognitive science and how they can be used and applied to develop artificial cognitive computing to improve the capability of computers to learn, carry out tasks more autonomously and interact more fluently with users;
- ii) develop principles of cognitive science - philosophy, psychology, neuroscience and computer science;
- iii) establish relationships between cognitive science and Cognitive Systems;
- iv) demonstrate methods of applying cognitive science to computing technologies
- v) distinguish between traditional computing and cognitive computing;
- vi) provide basic skills in applying the principal techniques associated with using and building cognitive computing systems and how cognitive computing can be applied to solve or tackle many real-world problems drawing examples from applications which might involve human computer interaction, information systems management, intelligent systems and computational intelligence, intelligent interactive games and design, robotics, intelligent

agents, intelligent information processing systems, financial time-series prediction and intelligent autonomous corporate decision making.

This module provides the student with an appreciation of issues in Cognitive Science which apply to Cognitive Systems/Computing. It addresses key areas such as, learning, memory, knowledge representation, sensory fusion, motor control, self-organization and social cognition. The student will use the material to understand how these processes can inspire new algorithms and software and be applied in computing systems. The student will be made aware of the many beneficial applications that Cognitive Systems has in many modern day computing technologies.

Research Methods

Research methods employ systematic strategies to generate knowledge about human behaviour, experience and environments in which the thought and action process of the researcher are clearly specified so that they are logical understandable, confirmable and useful. With these sentiments in mind this module first provides an understanding of how knowledge is obtained and how rationalism and empiricism provide a basis for knowing. This leads to the role of the Scientific Method and how it underpins the traditional/conventional scientific research process. The module then focuses on the nature of research in the computing discipline and the development of a process model for research in this domain. It also inculcates an ethical approach to research and develops an appreciation of the role of professional bodies with regard to research activity.

The aims of the module are to:

- i) provide a theoretical foundation for embarking on research in the computing/engineering domain;
- ii) enable participants to develop skills at providing a context and rationale for their proposed research;
- iii) help students apply good research techniques using appropriately selected research methodologies;
- iv) develop discriminative skills to enable students to evaluate their own and other research in relation to their peers and across their particular research domain;
- v) empower students to contextualise, justify, present and disseminate their research in an appropriate, meaningful and easily comprehensible fashion.

This module first provides a theoretical foundation for students embarking on research in the domain of computing/engineering. It then introduces the different approaches to research and considers the criteria to be employed when selecting a research methodology. The different stages in the research process are demonstrated via exemplars and this provides students with the necessary skills to develop a set of deliverables (e.g. literature review, project proposal presentation of results) associated with carrying out research. Embedded in all these activities is the reinforcement of the need for adhering to recognised ethical standards and taking a professional approach to carrying out research.

Object Oriented Information Systems

This module involves the design and develop information systems using object-oriented techniques, tools and technologies; to appraise the writings of researchers and leaders in the object-oriented field; to demonstrate a thorough understanding of industry-standard approaches to information systems development; to synthesise

and evaluate advanced object-oriented and modelling concepts and techniques; to judge the root causes and recommend solutions to the maintenance problem; and, to reflect on obligations to society as software engineering professionals.

The move to object-oriented systems development has been accelerated by the success and spread of OO programming and the recognition that OO methods produce information systems that are more effective, efficient, flexible and stable; indeed, use of the object-oriented paradigm for commercial information systems development projects is now widespread. This module introduces the rationale for the use of an object-oriented approach and studies the concepts underpinning the approach. Various object modelling methods covering both the analysis and design stages are discussed. Methodological approaches for information system development projects are studied, including the development and reuse of software components. Students will build information systems using OO methods and the UML case tools.

Computational Intelligence

The module is designed to further develop the students' appreciation of the current research in computational intelligent techniques. The module provides an overview of existing computational intelligence techniques and highlights the current research in the development of hybrid approaches. The module develops an understanding of these techniques and concludes by introducing the student to the current research focus in bio-inspired systems and artificial life.

The aim of this module is to introduce postgraduate students to the research domain of Computational Intelligent systems and to provide both a theoretical and practical description of how such systems are designed and implemented. Having completed this module the student will have an understanding of the computational intelligence research area. The module addresses both existing techniques used individually and in hybrid forms. The module also introduces the current research topics within this domain.

Artificial Intelligence and Knowledge Based Systems

Artificial intelligence and knowledge-based systems (AI/KBS) can improve the use of knowledge in organizations, and have evolved to the point where they are of commercial significance. This module develops methodologies and organizational applications of artificial intelligence and knowledge-engineering, and will develop the student's ability to apply these to the design and implementation of knowledge-based systems. Practice is gained in solving AI problems, and in the production of expert systems.

The aims of the module are to:

- i) develop the student's abilities to critically analyze and explain the foundations, methodologies and applications of artificial intelligence and knowledge engineering;
- ii) introduce the concepts and design principles used in the construction of artificial intelligence and knowledge-based systems;
- iii) provide expertise in applying the principal techniques associated with using and building artificial intelligence and knowledge engineering systems.

This module gives the student an understanding of the foundations, methodologies and organizational applications of knowledge-engineering, and will develop their ability to apply these to the design and implementation of artificial intelligence/knowledge-based systems (AI/KBS). Practice is gained in solving AI problems, and in the production of expert systems.

Intelligent Embedded Systems

The module is designed to extend the students' understanding of embedded systems, and in particular enable the student to gain expertise in the design, development and implementation of intelligent techniques on an embedded systems platform. The module provides a review of recent advances in embedded systems, and highlights the specific design issues pertaining to the creation of intelligent techniques as embedded systems. The module concludes by introducing the student to current research into autonomously self-adapting intelligent systems and hybrid biological/artificial systems. The aim of this module is to introduce postgraduate students to the research domain of Intelligent Embedded Systems and to provide both a theoretical and practical description of how such systems are designed and implemented.

The module introduces postgraduate students to the research domain of Intelligent Embedded Systems and provides both theoretical and practical description of how such systems are designed and implemented. In particular, focus is placed on the design issues and considerations for implementing intelligent systems on resource-constrained and low-powered systems.

Advanced Human Computer Interaction

Design of Interactive Systems should be informed by theory and follow a systematic engineering approach. The development of HCI knowledge is determined by theory, experimental psychology, and reflection on design practice. This module offers students a thorough grounding in the cognitive and socio-psychological theories that underpins the design of interactive systems. Raising awareness of the issues inherent for transferring theoretical knowledge into the design process, this module will focus on advanced topics such as Social and Cognitive Psychology, Sociology and Cultural studies, Computing and Interface Design, Business Process research, Graphic and Product design, Technical communication and Linguistics, all of which are necessary for the reflection and creation user-compatible interfaces.

The aims of the module are to:

- i) provide an opportunity for students to study, in some depth and in an integrated way, significant issues in the field of Human-Computer Interaction;
- ii) help students develop, through practice, skills in the collation and analysis of secondary research materials, to encourage reflection on current HCI issues and enable development of critical analysis for interactive design;
- iii) encourage appropriate conduct and levels of professionalism in group-work, and to develop skills in the verbal and written communication of complex information;
- iv) provide the opportunity for students to develop an Interactive System, based on their practical and theoretical knowledge.

This module provides the student with a sound knowledge of the concepts that underpin the Human Computer Interaction field. Basic and advanced methods, models and tools are critically reviewed and applied to provide the student with a strong sense of user-compatible software and legislative requirements. Particular attention is awarded to emerging technological development within the Financial Services industry and the role of the knowledge worker as a computer user. The opportunity to construct a simple Interactive System is provided to offer practical design experience.

Financial Services Information Systems

Financial services is the largest industry (or category of industries) in the world, made up of companies specialising in banking, insurance, investment, actuarial and brokerages services. To keep abreast of fast-paced developments in this industry, Financial Service corporations are often the first to adopt new technological developments, and typically have a plethora of platforms and applications optimised to meet their competitive needs. In order to operate systems on various platforms, from individual desk-top to virtual distributed systems, these organisations need highly-skilled, competent computer specialists in all areas of system analysis, design, implementation and testing.

The aim of this module is to introduce students to the Financial Services industry as a potential working environment. The module will examine the various sectors within the industry, with particular emphasis awarded to the Financial Services Authority (FSA) for corporate status, regulations, legislation and career opportunities. The role which ICT has played in emerging Financial Service practices will be investigated. Throughout the module students will be developing skills to meet future industry requirements in terms of technical, social and management potential.

This module informs the student of the various sectors which contribute to the Financial Services industry. Information systems engineering methodology and project management skills are used to solve industrial problems in team-based role-play scenarios. The module aims to develop the information, social, management and communication skills of the student in preparation for future employment within the Financial Services industry.

Database Technologies

Database technologies represent a core component of information systems within financial institutions. Typically these enterprise level systems must support large numbers of geographically dispersed users across the organisation. This module focuses on the design and development of complex enterprise level database systems.

The aims of this module are to:

- i) provide students with a detailed understanding of the core principles which underpin relational database systems;
- ii) convey the importance of employing methodical and structured techniques in the design and implementation of database systems;
- iii) develop the necessary skills required in the design and development of database systems;
- iv) introduce students to a range of database design and development tools and technologies;
- v) introduce students to a range of advanced database systems utilized in enterprise level data management.

This module is devoted to the understanding of database systems, and the environments in which they operate. The pivotal role of database systems within financial institutions and legacy systems is emphasised. The module covers the fundamental principles and theory of database design. Furthermore, students gain practical experience in designing and developing database systems using a range of techniques, tools and technologies.

Interoperability and Legacy Systems

Successful information systems must work within the environment of an organisation and must not only satisfy the current business requirements but provide a foundation from which future requirements can be met as the organisation evolves. By their very nature legacy systems are successful computer systems. Typically they have evolved with an organisation over a significant period of time and continue to offer substantial benefit. The migration of existing data and interoperability between new and existing systems represents a significant challenge within the financial services sector. This module provides students with the theoretical and practical skills required to migrate legacy systems and develop new systems that successfully interoperate with existing information systems.

The aims of this module are to:

- i. help students understand the evolution of and importance of legacy systems;
- ii. provide students with a detailed understanding and appreciation of technical challenges associated with the migration and interoperability of legacy systems;
- iii. evaluate and utilise various data migration strategies and techniques;
- iv. address security concerns associated with interfacing with legacy systems;
- v. investigate and evaluate the evolving data migration arena and use exemplars of the technologies that manifest this development.

The migration of existing data and interoperability between new and existing systems represents a significant technical challenge within the financial services sector. This module provides students with the theoretical and practical skills required to migrate legacy systems and develop new systems that successfully interoperate with existing information systems.

Network Management

The number of deployed networks, and people using them in the financial services, continues to grow. This module will introduce the concepts and principles of network management to guide the monitoring and deployment of modern, high quality reliable networks. In addition, students will be given the opportunity to learn how to configure network infrastructure equipment for complex financial based applications and how to integrate these within the network

The module aims to:

- i) develop an understanding of the theory and basic concepts of network management;
- ii) develop the ability to deploy and monitor complex network configurations
- iii) provide the student with the expertise to deploy network centric software applications.

This module will introduce the concepts and principles of network management to guide the deployment of modern, high quality reliable networks for the financial services. In addition, students will be given the opportunity to learn how to deploy and configure network equipment, deploy network based software applications and resolve network infrastructural problems. Students will have an in-depth knowledge of basic skills in networking, and an appreciation for emerging themes that could impact networking in the future.

Masters Project (Research)

The research project represents a piece of work performed by the student under suitable staff supervision which draws both from the practical and creative nature of a design project and the traditional, scholarly exposition of an area of study. The content of the work must be original, and involves a critical appraisal of some area relating to computing. The chosen topic must be sufficiently open-ended to allow a student to demonstrate his or her ability to develop lines of thought or to explore alternative approaches.

The research project offers the student an opportunity to complete a scholarly yet realistic piece of work during which material developed throughout the course and extended through in-depth literature research can be related and applied to a problem drawn from the commercial or industrial world or a research area. The project tests the inventiveness, the critical capacities, and the in-depth knowledge and problem solving skills of the student.

On completion, it must be evident that the student has a lucid, well-informed, and in-depth understanding of the area of knowledge or practice from which the topic was drawn. The student must be able to demonstrate a critical appraisal of the chosen area of study. A professional attitude to the quality of work and the quality of the practical achievement will be looked for. The masters project represents a piece of work performed by the student under suitable staff supervision which draws both from the practical and creative nature of a problem solving project and the traditional, scholarly exposition of an area of study. The content of the work is original and it contains a critical appraisal of the subject area.

Masters Project (Professional)

The Masters Project (Professional) represents a piece of work performed by the student under suitable staff supervision which draws both from the practical and creative nature of a computer based Technology project and the traditional, scholarly exposition of an area of study. The content of the work must be original, and involves a critical appraisal of some area relating to computing within the domain of study.

The chosen topic must be sufficiently open-ended to allow a student to demonstrate his or her ability to develop lines of thought or to explore alternative approaches. The Masters Project (Professional) offers the student an opportunity to complete a realistic piece of work during which material developed throughout the course and extended through in-depth literature research can be related and applied to a IT-related problem drawn from the financial, design or commercial services sector. The project tests the inventiveness, the critical capacities, and the in-depth knowledge and technical skills of the student.

On completion, it must be evident that the student has a lucid, well-informed, and in-depth understanding of the area of knowledge or practice from which the topic was drawn. The student must be able to demonstrate a critical appraisal of the chosen area which, if not original, must be at the leading edge of existing IT applications within their area of research. A professional attitude to the quality of work and presentation will be required. The Masters Project (Professional) represents an integrated piece of work performed by the student under suitable staff supervision which draws both from the practical and creative nature of a computer-based project and the wider financial, design, or industrial IT setting.

Design Theory and Method

This module aims to equip the student to organise problem investigations and design tasks, and to focus, present and discuss information. Each student will move through a three stage design process: analysis, synthesis and evaluation.

Analysis: listing all design requirements needed to complete a set of logically related performance specifications.

Synthesis: finding possible solutions for each individual performance specification and building up complete design from these with least possible compromise.

Evaluation: evaluating the accuracy with which alternative designs fulfil performance requirements for operation, manufacture and marketing, before design is selected.

The objective of this module is to introduce the student to processes associated with design, the theories that underpin the innovation and creativity of the subject and the related methodologies. To expose the student to existing theories of design within new media practise and communication design fields.

3D Computer Graphics Application

This module covers all the various aspects of the design process, project management and practical production. While many of the skills imparted are general, the emphasis is on the design process within the broad field of 3-Dimensional design application.

The module aims to:

- i) encourage Innovation and exploration of interdisciplinary content through creativity and technology;
- ii) help prepare students, through practice for project management using the design process, for their Research Project.

The content for this module will evolve from year to year, addressing where possible the most recent technological advancements and 3D design application trends or identifying new opportunities. General parameter guidelines will be set, however scope for individual direction will exist. This module offers an insight to 3D design and its applications, through practical projects that are current to developmental trends. Students will gain a solid level of proficiency with technical application, for further exploration in their studies. The promotion of innovation and a creative dynamic will be core. Students will be expected to develop a sense of professional acumen, through appropriate decision-making, team working and effective project production. A research-based approach will be encouraged.

Design Entrepreneurship Awareness

The module enables both recent graduates and current practitioners of industrial design and multimedia to become aware of the supporting bodies in entrepreneurship whilst focusing on the individual in the marketing and dissemination of issues regarding very separate and diverse projects. The module aims to give the students a thorough understanding of the fundamental theories, concepts, methodologies and strategies behind entrepreneurship in a design context in order that they may be implemented in a critical and analytical manner.

Modules in business and entrepreneurship have been growing in importance over the last few years as the University has recognised that those more proactive self starters should be given the opportunity to apply and convert their University training in their chosen professional field. This module in entrepreneurship equips the student with the knowledge and awareness essential for a start to their career in the field of design communication.

Design Entrepreneurship Applied

This is the implementation of enterprise. It emphasizes the importance of commercial application and success within the design discipline, placing a business context for both personal and project development. It extends knowledge gained in Design Entrepreneurship Awareness, in the context of student led projects. The application of entrepreneurship fosters reflection on the business value of their work and requires a quantification of project requirements.

The essential aims of the module are to:

- I) focus entrepreneurship in a design project specific context.
- II) define innovative steps in project or professional development.
- III) provide the opportunity for students to quantify project requirements and attain a project focus towards the commercialization/ business development of their work.

This module emphasizes the importance of commercial application and success within the design discipline, placing a business context for both personal and project development. Students experience the processes required in bringing ideas to reality in the business world. It encourages an ambitious, yet professional approach to the development of self-directed projects by requiring the completion of formal written application documents to external bodies. It exercises interpersonal skills and project management through structured digital presentations.

Assessment and Examinations

Purposes of Assessment

Assessment has a number of different aims. It gives you feedback about your progress and it also allows those teaching you to see how students are developing within the context of the programme. At the conclusion of your course, it enables the University to indicate to you, and the outside world, that you have attained the level required for the qualification in question.

Forms of Assessment

Performance in all modules is assessed. Two modes of assessment are used: coursework and examination. Coursework may be based on a wide range of activities such as: laboratory and programming tasks; essays; seminar papers; reports; class tests; oral presentations; individual or group projects. Modules you are taking may be assessed by coursework only or by coursework and examination.

Submission of Coursework

Coursework assessments such as case studies, programming tasks, and laboratory reports form an important part of the overall assessment of modules. In the case of modules that are assessed by both coursework and examination it is normally necessary to pass in both the coursework and examination in order to pass in a module, although limited allowance between the two may be permitted as described in the Course Regulations. The lecturers teaching each module will provide a schedule of the coursework assessments in the module including the dates by which they must be handed in. It is important that you should hand in the work by the due date. Whenever possible, the Course Director attempts to arrange the overall timing of coursework in the modules so that “bunching” does not occur. All coursework must be handed in according to the instructions on the assignment specification and cover sheet(see next page). The tutors will accept no responsibility for work that is handed-in in any other way.

Students may in exceptional circumstances seek prior consent to submit coursework after the official deadline using a form for this purpose know as an EC1 Form (EC is for Extenuating Circumstances). This form is available from your School Office, Course Director or from the University website at www.ulster.ac.uk/academicservices/student/. Such requests must be accompanied by a satisfactory explanation and accompanied in the case of illness by a medical certificate. This application shall be made to the Course Director. Coursework submitted without consent after the deadline shall not normally be accepted.

Examinations

These take place at the end of Semester 1 (in January) and at the end of Semester 2 (in May/June). Resit examinations take place in mid to late August. The number of examinations you are required to take is dependent on the number of modules that are not assessed by 100% continuous assessment.

UNIVERSITY OF ULSTER

FACULTY OF COMPUTING & ENGINEERING

COURSEWORK SUBMISSION SHEET

University Date Stamp

This sheet must be completed in full and attached to the front of each item of assessment before bringing to School Office (MG048)

Student Name

Registration No

Course Title.....

Module Code/Title.....

Lecturer.....

Date Due

Submitted work is subject to the following assessment policies:

- 1 Coursework must be submitted by dates as specified by the module co-ordinator
- 2 Students may seek prior consent from the Courses' Co-ordinator to submit coursework after the official deadline; such requests must be accompanied by a satisfactory explanation, and in the case of illness by a medical certificate.
- 3 Coursework submitted without consent after the deadline will not normally be accepted and will therefore receive a mark of zero.

I declare that this is all my own work and does not contain unreferenced material copied from any other source. If it is shown that material has been plagiarised, or I have otherwise attempted to obtain an unfair advantage for myself or others, I understand that I may face sanctions in accordance with penalties as determined by the University. A mark of zero may be awarded and the reason for that mark will be recorded on my file.

COURSEWORK RECEIPT – Not valid unless stamped – student please complete

Student Name

Module Code and Title

Staff-Student Consultative/Course Committee(SSCC) (also see Student Handbook-Section 6)

This is the key method for obtaining feedback from full time students about your programme of study and is a good opportunity for you to have a direct input into how your course/subject is run and how it might develop in the future. The SSCC is made up of elected student representatives from your programme/subject area, who are there to represent the views of your group of students, together with the Course/Subject Director and other members of academic staff. Through this committee you may discuss specific matters within individual modules but also more general issues such as approaches to teaching and learning assessment, library and IT resources, general University facilities and health and safety. For part-time courses, because of the difficulty of arranging convenient meeting times for student representatives on the course, Course/Subject Directors are not required to hold formal meetings but are encouraged to adopt a more flexible approach. In addition to SSCCs you are also represented on decision-making committees of the University and your Faculty through the Students' Union.

Student Representatives

Student Representatives are elected from within your programme or subject area to act as Course Reps on the SSCC or Course/Subject Committee. All students from your programme/subject area should have the opportunity to take part in the election of your representatives. Course Reps are there to represent your class as a whole and also feed back information from the University to students on their course/subject. Full-time students should elect a representative during the first few weeks of the academic year, and the election process will usually be coordinated by your Course/Subject Director. Part-time students may be asked to elect student representatives for their programme or subject but this will depend on the method of consultation chosen by the Course/Subject Director.

Student Feedback on the Learning Experience

The University values your views on the programmes and modules that you are taking very highly and aims to be responsive to both positive and negative feedback on your overall experience whilst you are a student at the University. Feedback and comment from students is encouraged in a number of ways, some formal and others informal. An online student survey gathers your views at the end of each module. In terms of formal methods, each programme/subject has a Course/Subject Committee which has a requirement to consult students and obtain their views, whether through the Committee itself or through a separate Staff-Student Consultative Committee. You may also report feedback via the Student Survey on the Quality of Teaching and the National Student Survey (NSS). In addition, you may be asked for feedback at various stages in your course or on particular aspects of your University experience. You may also be asked for your views on any proposed changes to your programme. Informally, lecturing staff may seek feedback from you about each of the modules that you are studying and your Studies Adviser will encourage you to raise any issues or concerns about your programme directly with them. The University also has a formal complaints procedure which allows you to raise serious concerns that haven't been effectively dealt with by other feedback methods.

Attendance, Absence and Appeals

CODE OF PRACTICE FOR MONITORING STUDENT ATTENDANCE

PROCEDURES FOR MONITORING STUDENT ATTENDANCE (MODULE OR OTHER NON-MODULE SPECIFIC EVENT)

1 Attendance will be monitored on all modules across all years of study (undergraduate and postgraduate). Schools may designate other non-module specific events (e.g. general tutorials, induction sessions, meetings with Advisors of Study) at which attendance may also be monitored.

2 Formal responsibility for attendance monitoring at module level and the maintenance of evidence lies with the Module Coordinator although additional School-level support may be provided. Module Coordinators will ensure that timely records of student attendance in an accessible format¹ are maintained.

3 At the start of each module², Module Coordinators will ensure that students are:

(a) reminded of their general attendance obligations³;

(b) advised of any additional module-specific attendance requirements;

(c) reminded of the resources available to them for informing them of non-attendance or other related issues;

(d) advised as to how attendance records for the module will be assembled. They will identify (for example):

- The range of classes at which attendance records will be taken (e.g. all lectures and lab classes; lab classes only; selected classes)
- The mechanism(s) employed (e.g. manual roll-call, use of technology such as Turning Point, WebCT engagement monitoring, combination of methods).

Members of staff assigned corresponding responsibilities for the other designated non-module specific events will provide corresponding information for their events.

4 All staff responsible for monitoring attendance will reflect regularly on the student attendance (and progress where appropriate) within their remit.

5 Module Level or other non-Module specific event.

Where a member of staff identifies a student's attendance profile as giving rise for concern (without reasonable explanation and in the absence of appropriate supporting documentation), they will invoke their School's process for investigation of student non-attendance.⁶ If this proves unsuccessful or the staff member is unhappy with the response received, (s)he will formally advise the student's Course/Subject Director of their concerns. The student's Course/Subject Director will arrange for the reasons for the student's absences to be investigated, meeting with the student if appropriate. Should a student's attendance continue to give rise for concern the student's Course/Subject Director will advise the Head of School who will formally communicate with the student inviting them to discuss the reason(s) for the recurring absences. Details of any meetings with a student at Head of School level will be recorded and placed on the student's file.

6 Failure to Submit Coursework

Where a student has failed to submit a piece of coursework (without reasonable explanation and in the absence of appropriate supporting documentation) the Module Coordinator will advise the student; and his/her Adviser of Studies and Course/Subject Director that a mark of zero has been awarded for the work as per University Policy. Module co-ordinators should use non-submission of coursework in conjunction with a student's module attendance profile to support invoking the School's process for investigation of student non-attendance or referring the student to their Course/Subject Director (as described under Point 5).

7 Staff will produce summary reports of attendance upon request from a Course/Subject Director and will also produce a final summary report on completion of the module.

8 Attendance will be monitored on all courses/programmes across all years.

9 Formal responsibility for attendance monitoring at Course/Programme level lies with the Course/Subject Director, although additional School-level support may also be provided.

Monitoring at course/programme level will be on the basis of reviewing records of attendance for those modules and other non-module specific events and activities that lie within their area of responsibility. To fulfill this duty, Course/Subject Directors will make every effort to obtain attendance information from Module Coordinators for relevant modules that are hosted outside of the Faculty.

10 As part of the Induction Process, Course/Subject Directors will ensure that students are:

(a) reminded of their general attendance obligations (quoting the Student Charter, Course Regulations and other relevant sources);

(b) reminded of the resources available to them for informing staff of non-attendance or other related issues (e.g. NA1 forms, EC1 forms)

(c) advised that attendance will be monitored at all taught modules

(d) advised of any other non-module specific events (e.g. general tutorials, induction sessions, meetings with Advisors of Study) at which attendance will be monitored.

11 Course/Subject Directors will make arrangements for ensuring that student attendance across the taught modules and the other events and activities at which student attendance and engagement is required are regularly reflected upon.

12 Concern (Course/Programme Level)

When a student's attendance profile (including using other evidence such as non-submission of coursework as appropriate) across a Course/Programme gives rise for concern (without reasonable explanation and in the absence of appropriate supporting documentation) the Course/Subject Director will arrange for the reasons for the student's absences to be investigated, meeting with the student if appropriate. Should a student's attendance continue to give rise for concern the student's Course/Subject Director will advise the Head of School who will formally communicate with the student inviting them to discuss the reason(s) for the recurring absences. Details of any meetings with a student will be recorded and placed on the student's file.

13 Course/Subject Directors will produce summary reports of attendance upon request from their Head of School.

Absence

If you are absent for any period of time from your study you should notify the Course Director and/or your Module Coordinator and if you have extenuating circumstances you should contact the School Office regarding the submission of an EC1 form. On this form you document your reasons for absence and your information will then be considered by a panel who will specify the options you have to make good the shortfall in your learning experience.

If you intend to apply for a leave of absence you should contact your Adviser of Studies or Course/ Subject Director who will advise you of the procedures to follow before leaving the University.

Appeals

You have the right to appeal, in appropriate circumstances, against a decision of a Board of Examiners or a Faculty Board or a Campus Progress and Award Board. An appeal must be based either:

- a) on evidence of extenuating circumstances relevant to your progress which in your view was not in the possession of the Board of Examiners when it made its decision; or
- b) on a procedural or other irregularity associated with the decision.

Any supporting evidence must be submitted by the date given. If you base your appeal on the submission of evidence of extenuating circumstances you will be required to provide a satisfactory explanation as to why such information was not submitted by the deadlines specified in the above section 'Presentation of Information about Extenuating Circumstances'. Once you have presented yourself for examination it is not open to you to appeal against the examiners' decision on the grounds of complaint about the delivery or management of the module/ course (see Student Handbook page 101 on student complaints).

Health and Safety (See www.ulster.ac.uk/hr/healthandsafety)

The University's policy is to give the highest priority to safeguarding the health and safety of employees, students and any member of the public who may be affected by its operations. To this end a Health and Safety Policy has been implemented. (See Student Handbook – section 8)

General Policy Statement

It is the University's policy to ensure, as far as is reasonably practicable, the health, safety and welfare at work of all its employees and students in accordance with the relevant statutory requirements.

University Safety Committee

Each Faculty has a Health and Safety Committee which meets three times a year. These Faculty Health and Safety Committees can consider recommendations or complaints from students and recommend appropriate action. If you wish to raise a health and safety issue at a committee please contact the Faculty Office.

Fire/Emergency Procedures

Notices are posted throughout the University detailing specific fire and emergency procedures for the areas concerned. Students are advised to familiarise themselves with these procedures. Fire Drills are held biannually on all campuses. These are carried out for your safety and cooperation is essential.

Reporting Accidents

In case of injury during working hours at Coleraine or Jordanstown contact the Student Health Service. Outside normal hours and at Belfast or Magee, you can request an accident report form from the main entrance reception desk. Your supervisor or warden should be informed of all accidents, whether or not they result in injury and an accident report form must be completed. These forms are available from the nursing staff and Faculty Offices.

Career Development Centre

It is a good idea to visit the Careers Development Centre (CDC) early in your programme. CDC staff can help you to identify the opportunities, both within and outside the University that can enhance your employability skills.

What information is provided

It provides information on:

- Choosing a career
- Graduate occupations
- Work experience and graduate opportunities
- Choosing and financing a further course of study
- Working and studying abroad
- Graduate employers
- Making applications and writing CVs
- Interview techniques and selection centres
- Jobs of previous graduates

Links with Employers

The Careers Development Centre has close links with major employers and organises a series of career fairs and workshops throughout the year. These events give you the opportunity to assess your career and graduate study options, in addition to speaking directly to prospective employers.

Find out more about career opportunities

Go to <http://careers.ulster.ac.uk>

Telephone contact: Magee 028 7137 5600

Student Services/Students Union

The University provides a wide spectrum of student services including:

- Information Services
- Library Service
- ICT Customer Services
- Accommodation
- Catering
- Sport for all
- Student Support
- Childcare Services
- Health Services
- Counselling Services
- Disability Services
- Childcare Services
- Student Funding Advice

International Students
Welfare Rights
Student Union
Chaplaincy

(See University Student Handbook – section seven for more details)

Students Union

As a University of Ulster student you are automatically a member of the Students' Union. Nine student representatives who represent your interests within and outside the University run the Union. In order to ensure effective representation the Union organises regular meetings of its members. The Union provides a varied entertainment course through its club bars. Check out the Union website at www.uusu.org for full events listings.

The Students' Union also operates commercial services such as sandwich bars and shops which offer excellent value for money. It also has a confidential Welfare Service, which advises students on all issues from course problems to personal problems. The Union's Student Financial Advisor is also available to offer advice on student loans, budgeting, debt etc.

The Union funds a wide range of clubs and societies. From the Soccer Club to the International Students Society there is something to suit everyone. New students can join any of the clubs or societies at the Fresher's Fayre held during Fresher's Week.

The Students' Union encourages your active participation. In your first couple of weeks at university call into the Students' Union. You don't need a reason and there will always be someone to talk to about the Union activities on your campus.

Prizes

The University offers annually a substantial number of prizes and awards for competition among students. The great majority of these are awarded by Boards of Examiners to the most successful students on their courses. Information about the availability of a prize on a course is available from the Course/Subject Director or from the Course/Subject handbook or from the course notice board.

There are also a number of awards available to students across courses. Details, including dates of application, are publicised within faculties or may be obtained from the Academic Office.

There are two target awards for these suite of postgraduate programmes:

8OVER8 Award for the best overall postgraduate student

FIDESSA Award for the best Computing for Financial Services student.

Contact the Course Director for more details.

Dr	Xin Zou	Research Associate	MS018	75549	x.zou@ulster.ac.uk

Research Students

Title	Name	Position	Room	Ext.	Email
Mr	Kamal AbuHassan	Research Student	MS216	71275	abuhassan-k@email.ulster.ac.uk
Mr	Alan Browne	Research Student	MS216	75325	browne-t@email.ulster.ac.uk
Mr	Fraser Cadger	Research Student	MS216	75173	cadger-f@email.ulster.ac.uk
Mr	James Connolly	Research Student	MS125	75156	Connolly-j3@email.ulster.ac.uk
Mr	Gautham P.Das	Research Student	MS125	71164	p_das-g@email.ulster.ac.uk
Mr	Gabriel Adrian Deak	Research Student	MS125	75418	Deak-g@email.ulster.ac.uk
Mr	Conrad Deighan	Research Student	MS125	75176	Deighan-c1@email.ulster.ac.uk
Ms	Xuemei Ding	Research Student	MS125	71165	Ding-x@email.ulster.ac.uk
Mr	Syed Faraz Hasan	Research Student	MS125	75387	Faraz_hasan-s@email.ulster.ac.uk
Mr	Eoghan Furey	Research Student	MS125	75175	furey-e1@email.ulster.ac.uk
Mr	Vaibhav Gandhi	Research Student	MS216	75392	Gandhi-v@email.ulster.ac.uk
Mr	Gaurav Garg	Research Student	MS125	75085	Garg-g@email.ulster.ac.uk
Mr	Pawan Goyal	Research Student	MS216	75243	Goyal-p@email.ulster.ac.uk
Miss	Eva Hanser	Research Student	MS125	41208	Hanser-e@email.ulster.ac.uk
Ms	Rosaleen Hegarty	Research Student	MS125	75710	hegarty-r@email.ulster.ac.uk
Ms	Jennifer Hyndman	Research Student	MS125	71195	Hyndman-j2@email.ulster.ac.uk

Mr	Simon Johnston P/T	Research Student	MS216	75172	s.johnston@email.ulster.ac.uk
Mr	Alok Joshi	Research Student	MS125	75443	Joshi-a@email.ulster.ac.uk
Mrs	Karen Mary Lee	Research Student	MS125	71200	Lee-k1@email.ulster.ac.uk
Mr	Snaider C. Lindado	Research Student	MS125	75409	Carrillo_lindado-s@email.ulster.ac.uk
Mr	Karl McCreadie	Research Student	MS216	71242	Mccreadie-k1@email.ulster.ac.uk
Mr	Emre Ozbilge	Research Student	MS216	75365	ozbilge-e@email.ulster.ac.uk
Mr	Indrazno Siradjuddin	Research Student	MS216	75484	siradjuddin-i@email.ulster.ac.uk
Mr	Philip Vance	Research Student	MS216	75592	vance-p@email.ulster.ac.uk
Mrs	Jingling Wang	Research Student	MS216	75076	wang-J1@email.ulster.ac.uk
